

Set up Talyx in Gemini Apps

Start here. Follow these steps in order.

Create a Gem on a computer while signed in to Gemini Apps.
Gem availability and sharing follow your account and organization settings.

1 Create a Gem

Open `gemini.google.com`. Select Explore Gems, then New Gem.
Name it Talyx Setup.

2 Add Talyx instructions

Open `gemini-gem-instructions.md`. Copy only the instruction text inside its text block.
Paste that text into the Gem Instructions field.

3 Add company context

Under Knowledge, click Add files and upload `talyx-company-setup.md`.
Add only approved company information.

4 Save and open your Gem

Click Save, then open Talyx Setup.

5 Set up Talyx and reuse its file

Say “Set up Talyx” and answer the short questions.
Save the updated `talyx-company-setup.md` and replace the Knowledge copy for reuse.

Need help?

Use only the instruction block in the supplied file, not its surrounding setup notes. If Gem creation is unavailable, check your account or organization policy.
